

Alto's Laylite Range

100% Recycled
HDPE Culvert
Pipes & Flumes.

Alto Packaging – Get to know the most exciting packaging company in Australasia

Light-weight HDPE construction makes for fast and safe installation.

Laylite is a range of culvert and flume products produced by New Zealand plastic manufacturer Alto, who focus on developing and supplying products that are sustainable.

The Laylite range is available in diameters of 400mm and 600mm with a corrugated bore to assist in controlling water flow. It is an economical, light-weight pipe which requires no heavy machinery for handling, making it a very cost effective and easily transportable choice. A 6.6 metre length of Laylite pipe weighs only 63kg!

Features

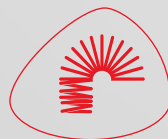

Laylite is light-weight and made in manageable lengths which interlock for versatility. Laylite is manufactured from recycled HDPE plastic, reducing waste issues within the environment. The recycled plastic is a mix of post-industrial regrind and post-consumer plastic returned through the waste stream. It is eco-friendly and environmentally sustainable.

- Fast and safe installation
- Easy to transport to and around the farm
- Designed to resist weather conditions and built to last
- Carbon black additive protects from harmful UV rays and ensures a longer service life

The Key Features of our Range

Light Weight

Flexible

Simple to Install

100% Recycled Material

Cost Efficient

Configurable to any length

400mm Culvert is Transit NZ F/2 Approved

Culvert Features

- Available in 400mm and 600mm diameters
- Comes in standard lengths with bayonet interlocking system or various welded lengths to suit a wide range of applications
- Can be contoured to most landscapes
- Ideal for installations in remote and difficult to access areas

Flume Features

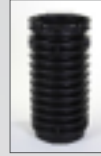

- Easily and securely coupled by means of self-tapping stainless steel screws over interlocked flume corrugation
- 10° maximum longitudinal flex allows flume to meet ground contours for ease of installation
- The corrugated channel helps control discharge velocities, reducing potential erosion
- Easily connected to a wide range of culvert pipes manufactured from alternative materials

Applications include

- Forestry
- Farming
- Roothing
- Reticulation
- And more

Laylite Culvert Pipe Range

Laylite Culvert's one metre short length option and unique bayonet interlocking system make it ideal for culvert installations in remote and difficult to access areas.

	Culvert 400	Culvert 400	Culvert 600
MATERIAL	100% Recycled, UV Stabilised HDPE	100% Recycled, UV Stabilised HDPE	100% Recycled, UV Stabilised HDPE
COLOUR +	Black	Black	Black

Laylite Flume Range

Laylite Flume is economical, light-weight and flexible, making handling and installation quick and easy for cost effective erosion protection around the farm.

Laylite Valve Box & Soak Pit Range

Laylite Valve Boxes and Soak Pits are rugged and easily fabricated to required length and pipe diameter. They are economical, versatile and easy to install making them a cost effective choice.

The large 408mm internal diameter allows for a wide range of valve configurations and ample room to operate and service these valves, while the turn locking lid offers security and easy access.
